About the Speaker - Beth Massura

- Associate Platform Operations Consultant at Etumos
- 3x Marketo Engage Champion
- 2x certified expert

What We'll Cover

- How to be proactive about identifying issues
- How to use Marketo Engage features to your advantage
 - System notification emails
 - Alert emails
 - Smart list and report subscriptions
- How to establish a preventative maintenance routine

1. Anticipate and Prioritize Potential Issues

Why Being Proactive Is Important

Marketo Engage handles a lot of important data and processes

Issues are inevitable
Human error, poorly defined business processes, technical glitches

Prevent bigger issues by monitoring and acting early before they get out of control

What Could Go Wrong?

Issue	Impacts
People created without email addresses in the CRM	<ul style="list-style-type: none">• Takes up space in database without being usable• If they fill out a form, a separate record is created
Non-standard country values from manual list import	<ul style="list-style-type: none">• May target people outside of serviceable areas• May not be following regional privacy policy
CRM sync fails due to a new picklist on a field	<ul style="list-style-type: none">• Latest record data will not pass to CRM• Older CRM data may overwrite newer Marketo Engage data
No acquisition program due to lack of smart campaign setting it	<ul style="list-style-type: none">• Unable to measure impact of marketing efforts
Person source isn't processed due to an uncategorized parameter	<ul style="list-style-type: none">• Unable to measure impact of marketing efforts
People not in a lifecycle stage due to a faulty flow step	<ul style="list-style-type: none">• Inaccurate picture of funnel volume• Records not routing
Scoring not firing because trigger campaign was automatically deactivated	<ul style="list-style-type: none">• Records not qualifying and passing to Sales

Where to Start - How to Prioritize

What is most critical?
*MQLs not sent to Sales
due to a sync error*

What will be harder to resolve
the more time passes?
*Activity data may not be available
to backfill program statuses*

What will impact other processes?
*Non-standard country prevents person
from correct consent processing
and targeted regional marketing*

2. System Notification Emails

System Notification Emails Overview

“Notifications” in top nav shares important information about errors affecting your instance
Campaign failures, sync issues

Subscribe by email to specified notification types built into your instance

Subscription adds more protective layer
More noticeable than notification counter, don't have to log in before seeing it

System Notification Email Example

Salesforce Sync Error: Unable to update Lead

Marketo Notifications <no-reply@marketo.com> Jan 27, 2021, 10:34 PM (18 hours ago)

to

Salesforce Sync Error

Why: Marketo is unable to update Lead in Salesforce.

Error details:
REQUIRED_FIELD_MISSING: Required fields are missing: [LastName]

Sample Leads: Showing 6 of total 6 affected Leads

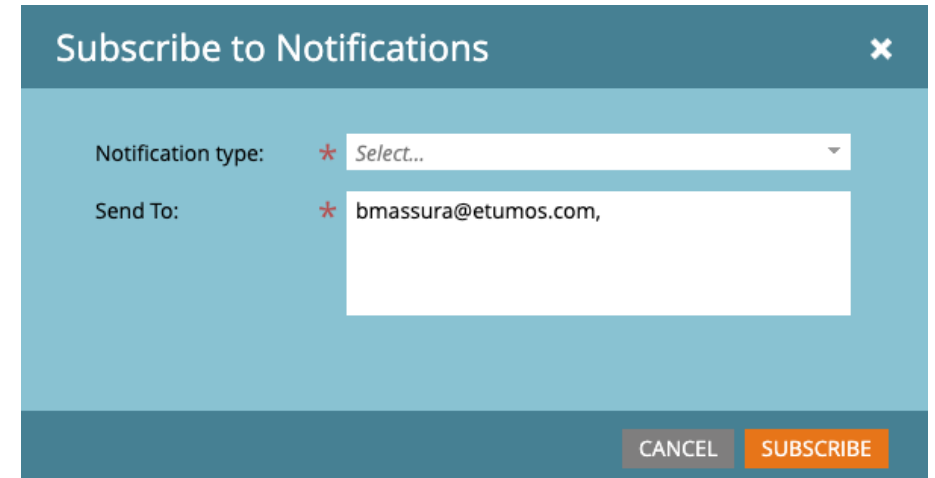

[Redacted]
[Redacted]
[Redacted]

What to do now?
Contact your Salesforce admin for further troubleshooting.

This email was sent to [Redacted] If you no longer wish to receive messages like this, you can [unsubscribe from Sync Failure Notifications](#).

How to Set Up System Notification Emails

1. Click “Notifications” in upper right in top navigation
2. Click “Subscribe” in top gray bar 
3. Fill out the dialog box
 1. Notification type
 2. Send To:
 3. If you have Workspaces in your instance, you will be prompted to select 1 or more

A dialog box titled "Subscribe to Notifications" with a close button (X) in the top right corner. The dialog has a light blue background. It contains two fields: "Notification type:" with a dropdown menu showing "Select..." and a red asterisk; and "Send To:" with a text input field containing "bmassura@etumos.com," and a red asterisk. At the bottom right, there are two buttons: "CANCEL" in a gray box and "SUBSCRIBE" in an orange box.

Note: You have to set up each notification type separately

System Notification Types

- What options you see depends on what you have configured for your instance
- Resource: <https://docs.marketo.com/display/public/DOCS/Notification+Types>
- Examples (the bold purple ones are those I find the most important/frequent):
 - **Campaign Failure**
 - **Idle Trigger Campaign Cleanup**
 - Engagement
 - **CRM Sync**
 - Announcements
 - Web Services
 - Facebook Ads
 - Google AdWords
 - LinkedIn Matched Audiences
 - No Draft
 - DNS Configuration Error
 - Push Notification
 - SSL Certificate Expiration
 - SMIME Certificate Expiration
 - Asset Expiration Failure
 - Mass Action Failure
 - Webinar Service Expiration

Who to Include on Notifications

- Think of what team(s) would be needed to troubleshoot and resolve
 - **Marketing Operations:** Campaign Failure, Idle Trigger Campaign Cleanup...
 - **IT/Web Dev:** Web Services, DNS Configuration Error, SSL Certificate Expiration, SMIME Certificate Expiration...
 - **Sales:** CRM Sync...
 - **Digital Marketing:** Facebook Ads, Google AdWords, LinkedIn Matched Audiences...
- Use shared email addresses when possible so notifications aren't missed when people are out of office or leave the organization

What to Do When You Get a System Notification Email

1. Note the notification type
2. Review the error details
 - What system(s) are involved?
 - Look up technical error codes online
 - Web service error codes: <https://developers.marketo.com/rest-api/error-codes/>
 - SFDC errors: <https://docs.marketo.com/display/public/DOCS/Salesforce+Diagnostics>
3. View affected lead(s) and/or campaign(s)
 - Where did the bad data come from? (e.g. list import)
 - Do you need to run a batch campaign to resolve the issue?

System Notification Walkthrough: Campaign Failure

- Exact campaign and flow step pinpointed
- If still don't see an issue with it, try removing and re-adding flow step
- Last edited info provides user to ask questions or educate

Campaign Failure

Campaign name: [~ZOP - !Lifecycle Processing.201 - MEL: Controller](#)

Why: [Flow step 1](#) choice 1 has an error. Only this flow step was skipped.

What to do now?
Make sure the Smart Campaign is configured properly.

System Notification Walkthrough: Idle Trigger Campaign Cleanup

Campaign Cleanup Scheduled

What: Marketo automatically deactivates trigger smart campaigns that are no longer useful to you. This speeds up the overall performance of your system.

Marketo has found 204 Idle Trigger Campaigns which will be deactivated next week on Jan 22, 2021.

Why: These campaigns have had no activity for over 6 months.

What to do now? Nothing, we will automatically take care of it for you. If there is a campaign you wish to keep active, just deactivate/activate it and the 6 month clock will be reset.

Note: This is a service provided by Marketo once per quarter.

- View notification in Marketo Engage to access list of affected campaigns
- Identify evergreen/operational campaigns that should stay active -> deactivate and immediately reactivate to reset the clock
- If infrequently triggered, consider shifting to batch instead of trigger

Campaign Cleanup Scheduled

What: Marketo automatically deactivates trigger smart campaigns that are no longer useful to you. This speeds up the overall performance of your system.

[These Idle Trigger Campaigns](#) will be deactivated next week on **Jan 22, 2021**

Why: These campaigns have had no activity for over 6 months.

What to do now? Nothing, we will automatically take care of it for you. If there is a campaign you wish to keep active, just deactivate/activate it and the 6 month clock will be reset.

Note: This is a service provided by Marketo once per quarter.

System Notification Walkthrough: CRM Sync

- Error details may be technical, but typical scenarios include:
 - Marketo Engage sync user doesn't have access to the object -> CRM admin update permissions
 - New field validation rule or picklist -> build Marketo Engage process to support requirements
 - Error with CRM processes triggered by record sync -> CRM admin fix process
- May identify overall need to be better aligned with CRM admin

Salesforce Sync Error

Why: Marketo is unable to update Lead in Salesforce.

Error details:
FIELD_CUSTOM_VALIDATION_EXCEPTION: If the Contact Status is "Disqualified"; a Reason for Disqualification must be selected

Sample Leads: Showing 2 of total 2 affected Leads

.....@.....com
.....@t.....com

What to do now?
Contact your Salesforce admin for further troubleshooting.

Potential Downside: Notification Overload

- One main issue, like a CRM Sync error due to a process failure could result in a large volume of (and/or recurring) notification emails
- You may want to temporarily unsubscribe from the notification type until the issue is resolved to avoid a crowded inbox
 - Click the unsubscribe link in one of the emails
 - You can set up the subscription again after the issue is resolved
 - You'll still be able to see all notifications within Marketo Engage

System Notification Emails Summary

Ease of setup

Very easy

Flexibility

Low - specific issues only; no customization

Timeliness

Within a day

Ease of Interpretation

Medium - some may be technical and require looking up an error code

Scalability

n/a

Best for

Rare, specific issues that fit the options available

3. Alert Emails

Alert Emails Overview

Uses Send Alert flow step

Triggered when person does/doesn't go through operational process or have certain value

Send alert to person who can troubleshoot & resolve instead of sales owner

Alert Email Example

ERROR: OP - Permissions Processing Inbox x

Marketo Engage Alerts

to me ▾

Hello,

The following record could not be processed by OP - Permissions Processing. Please review and resolve.

Marketo Alert Information

Lead: [Mark Eto \(SFDC Detail\)](#)

Campaign: OP - Permissions Processing.ZZ - ERROR

Time: Jan 10, 2021 9:30 am PST

This record could not be sorted due to the Country value. Make sure the Country value is standardized and accounted for in the flow step choices.

How to Set Up Alert Emails: The Right Kind of Situation

- Where you wouldn't anticipate regular issues, and it would affect individuals rather than general groups of people
- Exhaustive flow step choices
 - Example: Permissions processing (aka privacy compliance) - All countries should be accounted for. If a country is missing from the flow step choices, you'll want to know so you can add it
- Webhook or Launchpoint integration errors
- Egregious data values
 - Example: If you already have a standardization program in place, you may want to know what isn't successfully standardized

How to Set Up Alert Emails: The Email Asset

- Create an email asset using a basic email template
- Add in the subject and body any information useful to give context as to what the issue is. Tip: use tokens!

From:	{{my.Alert From:default=Marketo Engage Alerts}}
From Address:	{{my.Alert From Address:default=mops@somecompany.com}}
Reply-to:	{{my.Alert Reply-to:default=mops@somecompany.com}}
Subject:	ERROR: {{(program.name:default=an operational program)}} 54

Hello,

The following record could not be processed by {{(program.name:default=an operational program)}}. Please review and resolve.

{{SP_Send_Alert_Info:default=record info could not be displayed}}

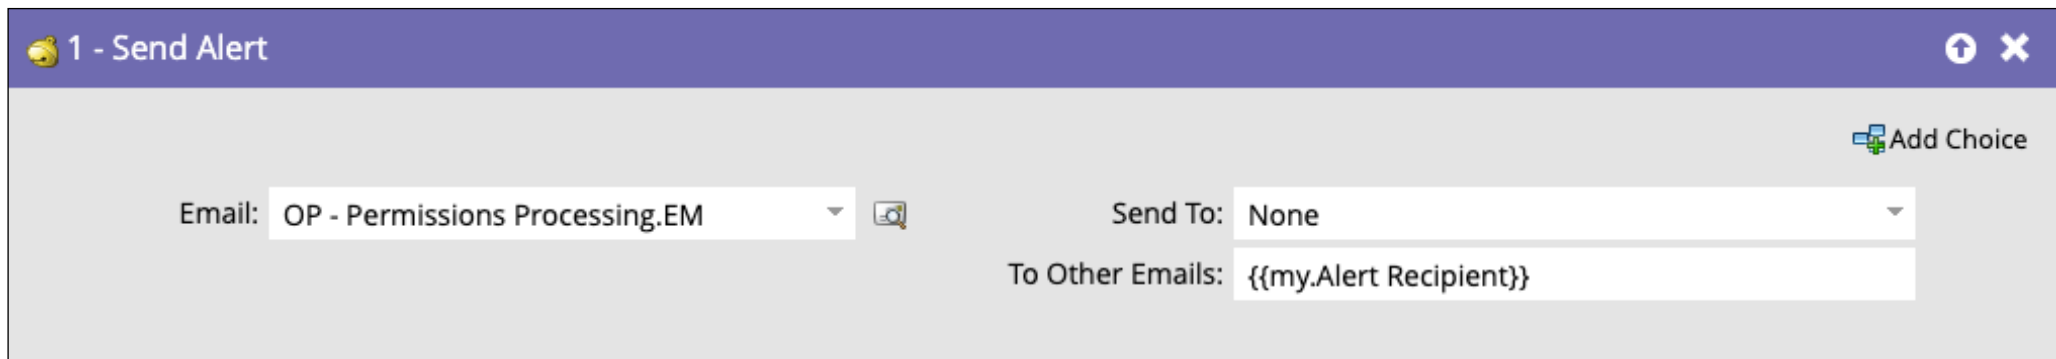

{{my.Alert Details:default=Please review the program to determine how to troubleshoot.}}

How to Set Up Alert Emails: The Email Asset, cont'd.

- System program tokens to automatically populate the specific program information
 - {{program.name}} for the program name in the subject and/or body
- Custom program tokens (aka “my” tokens)
 - Description and tips for troubleshooting
- {{SP_Send_Alert_Info}}, a special alert-only token, to populate important info in the body:
 - First & last name linked to the Marketo Engage record of the affected person
 - Link to the person's SFDC record
 - Campaign name that sent the alert
 - Time alert was sent
 - Resource: <https://docs.marketo.com/pages/releaseview.action?pagelId=2952678>

How to Set Up Alert Emails: The Error Campaign

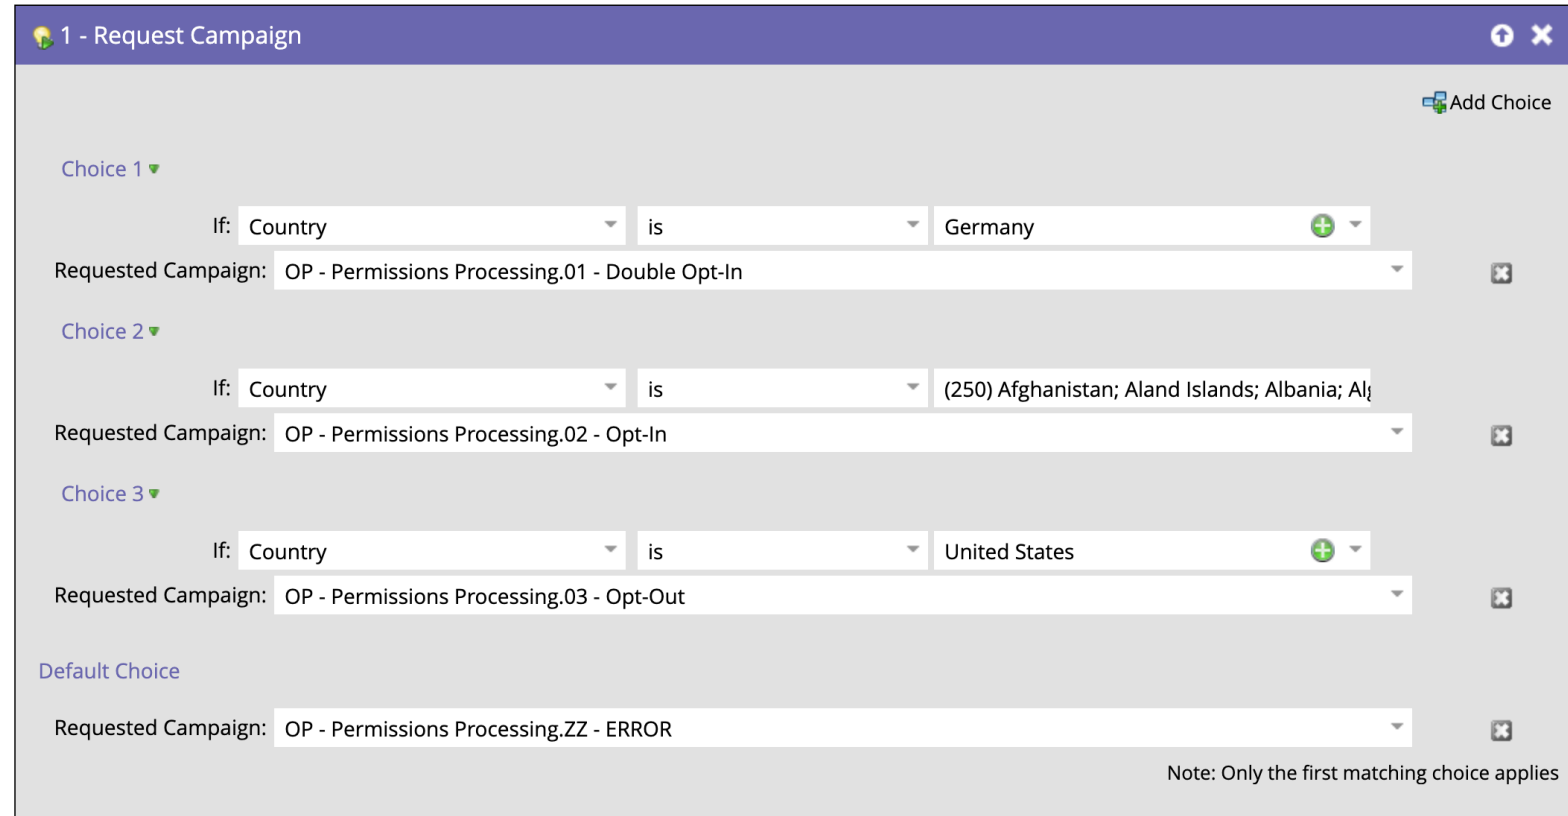

- Create a triggered smart campaign with a send alert flow step using this email asset
 - Send To: Select “None”
 - To Other Emails: set to the people who should be alerted
 - Same recommendations apply
 - Tip: use a custom program token - or inherited global token - for the recipient email address
- Resource: <https://docs.marketo.com/display/public/DOCS/Send+Alert>

The screenshot shows a configuration window titled "1 - Send Alert". It features a search icon and a close button in the top right corner. Below the title bar, there is an "Add Choice" button. The main configuration area includes three fields: "Email:" with a dropdown menu set to "OP - Permissions Processing.EM" and a search icon; "Send To:" with a dropdown menu set to "None"; and "To Other Emails:" with a text input field containing the token "{{my.Alert Recipient}}".

How to Set Up Alert Emails: Requesting The Error Campaign

- Add the smart campaign as a default choice on a process where everyone should qualify for one of the other choices (i.e. make it exhaustive)
- Could also trigger the error campaign directly with a data value change for egregious values, or based on a webhook response for a webhook failure

The screenshot shows a configuration window titled "1 - Request Campaign". It contains four sections for defining choices and a default choice:

- Choice 1**: If: Country is Germany. Requested Campaign: OP - Permissions Processing.01 - Double Opt-In.
- Choice 2**: If: Country is (250) Afghanistan; Aland Islands; Albania; Al. Requested Campaign: OP - Permissions Processing.02 - Opt-In.
- Choice 3**: If: Country is United States. Requested Campaign: OP - Permissions Processing.03 - Opt-Out.
- Default Choice**: Requested Campaign: OP - Permissions Processing.ZZ - ERROR.

A note at the bottom right states: "Note: Only the first matching choice applies".

What to Do When You Get an Alert Email

1. Review the contextual information provided in the subject and body of the email
2. Click through to view the person's record in Marketo Engage and/or the CRM
3. Determine whether the processing program needs to be updated
4. Update the person's record manually and/or rerun the process as needed

Alert Emails Summary

Ease of setup

More involved - may require reconfiguration of operational program

Flexibility

High - control over criteria and content

Timeliness

Immediate

Ease of Interpretation

High - with appropriate content to guide the recipient

Scalability

High - with program templates and/or centralized error program

Best for

Catching rare, unexpected exceptions/values

4. Smart List/Report Subscriptions

Smart List/Report Subscription Overview

Sends email on specified cadence with link to smart list or report

Smart list subscription includes link to download list of people

Report subscription options for attachment and/or the first several rows of data in email body

Smart List Subscription Example

Duplicates by Email to Review

DOWNLOAD REPORT

Smart List: [Duplicates by Email to Review](#)

Smart List definition: Smart List: Duplicates by Email to Review

(ID 56575)

rule logic: ALL filters

#1: Member of Smart List is 'Duplicates by Email'

Smart List: Duplicates by Email

(ID 56574)

rule logic: ALL filters

#1: Duplicate Fields is 'Email Address'

Note: Reports are limited to one-hundred thousand records.

If you no longer wish to receive this message, you can [unsubscribe from this report](#).

Report Subscription Example

People by Lifecycle Status

Report: [People by Lifecycle Status](#)
Generated: Feb 28, 2021 10:50 PM PST
Time Frame: All Time
Smart List: 1 rule

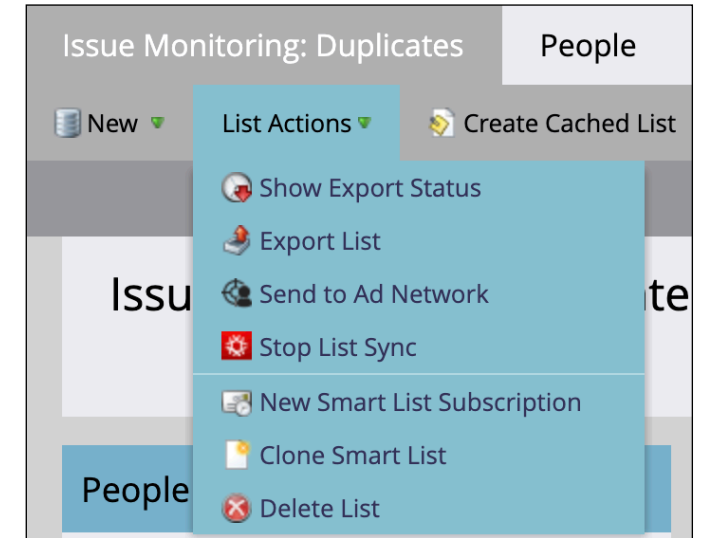

4 (all)

Lifecycle Status ↓↓	Total People
9 - Disqualified	177
7 - MRL	1
2 - MQL	1
1 - MAL	6
Total (4):	185

If you no longer wish to receive this message, you can [unsubscribe from this report](#).

How to Set Up a Smart List Subscription

- Create a smart list to capture problematic records, such as duplicates, missing acquisition program, etc.
 - Be clear in the smart list name and include a description to provide context
 - Not available on system smart lists like “Possible Duplicates” (You’ll have to recreate)
 - Limit of 100 subscriptions across instance; be mindful of what other users may need
- From the smart list, go to List Actions > New Smart List Subscription in the gray navigation bar
- Give it a name to reflect what it captures

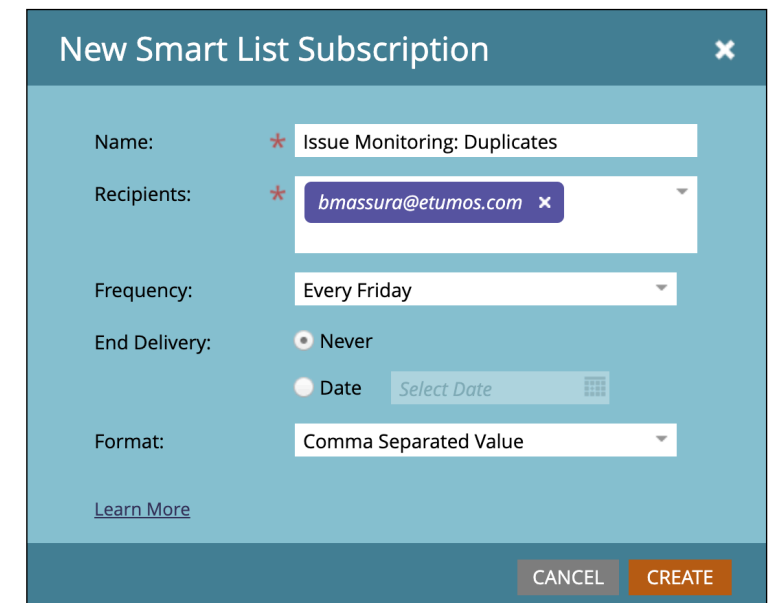

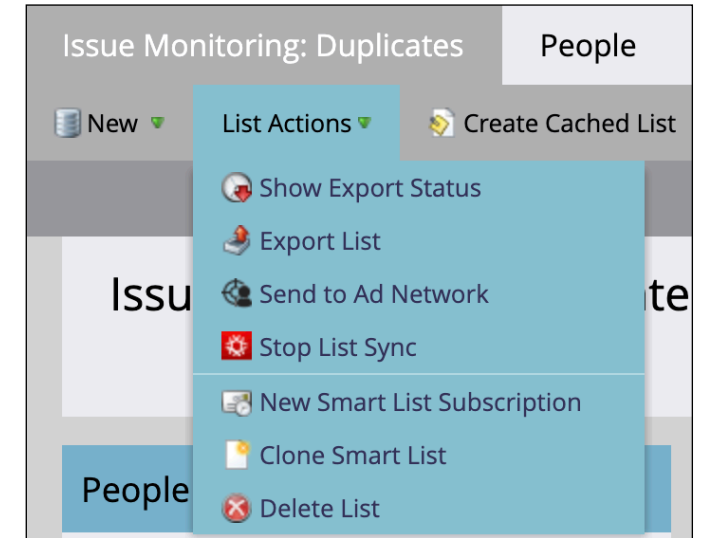

A screenshot of a "New Smart List Subscription" dialog box. The form contains the following fields and values:

- Name: Issue Monitoring: Duplicates
- Recipients: bmassura@etumos.com
- Frequency: Every Friday
- End Delivery: Never, Date (with a "Select Date" button)
- Format: Comma Separated Value

At the bottom of the dialog, there are "CANCEL" and "CREATE" buttons. A "Learn More" link is also present.

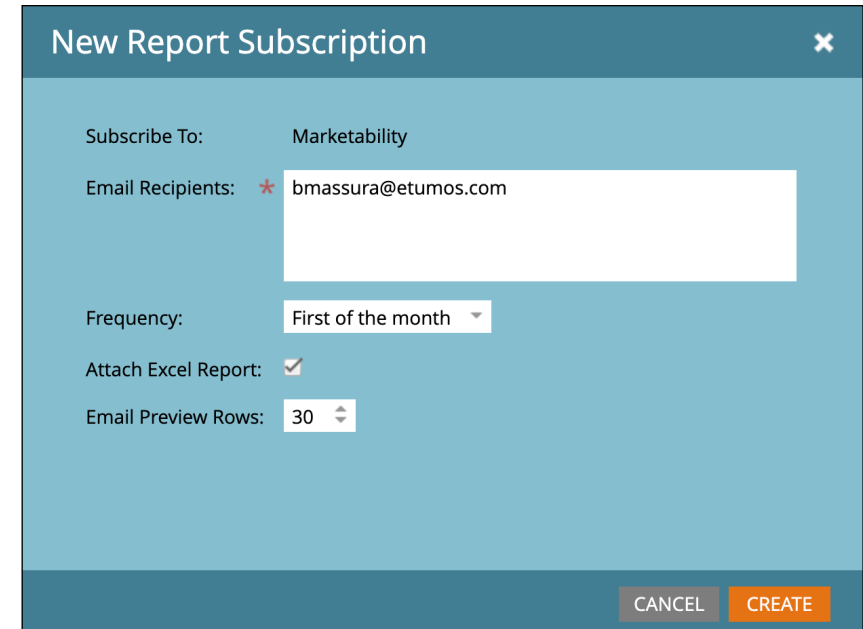

How to Set Up a Smart List Subscription, cont'd.

- Enter one or more email addresses to receive the email
 - Same recommendations apply
 - Admin setting for whether or not a person has to log in to download
- Select a frequency: Daily, Every [Day of Week] or First of the Month, and end date, if applicable
 - Note: will get email even if there are no people in the smart list
- Select format of downloaded results (Comma Separated Value is most common)
 - Consider data privacy/security if sharing with people who don't have a Marketo Engage login
- Resource:
<https://docs.marketo.com/display/public/DOCS/Subscribe+to+a+Smart+List>

A screenshot of the 'New Smart List Subscription' form in Marketo. The form has a title bar with a close button (X). The fields are: 'Name' (Issue Monitoring: Duplicates), 'Recipients' (bmassura@etumos.com), 'Frequency' (Every Friday), 'End Delivery' (Never), 'Format' (Comma Separated Value), and a 'Learn More' link. At the bottom, there are 'CANCEL' and 'CREATE' buttons.

How to Set Up a Report Subscription

- Create a report to monitor the health of your database
 - Be clear in the report name and include a description to provide context
- From the report, go to the Subscriptions tab > New Report Subscription in the gray navigation bar
- Enter one or more email addresses to receive the email
 - Same recommendations apply

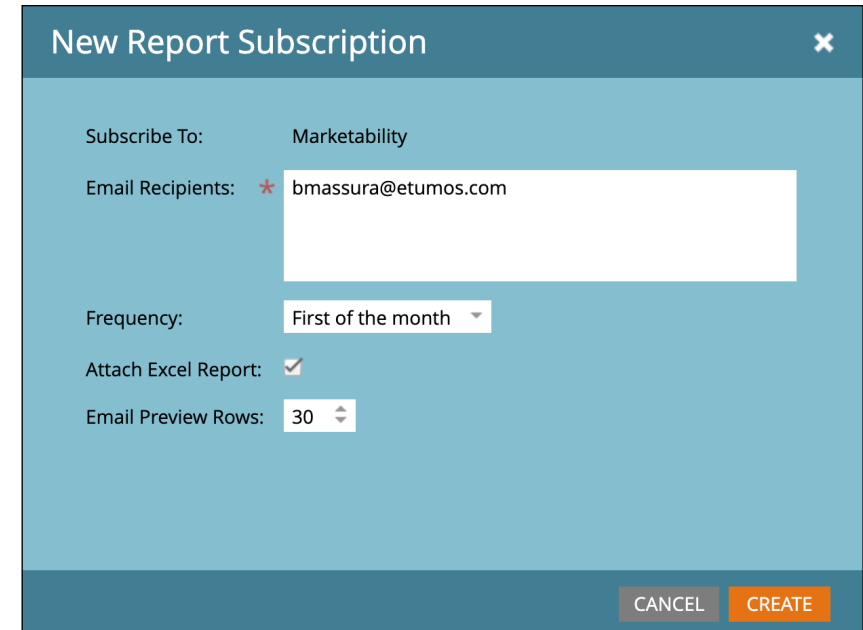

A screenshot of a 'New Report Subscription' dialog box. The title bar is dark blue with a close button (X). The main area is light blue and contains the following fields:

- 'Subscribe To:' with a dropdown menu set to 'Marketability'.
- 'Email Recipients:' with a red asterisk icon and a text input field containing 'bmassura@etumos.com'.
- 'Frequency:' with a dropdown menu set to 'First of the month'.
- 'Attach Excel Report:' with a checked checkbox.
- 'Email Preview Rows:' with a spinner box set to '30'.

At the bottom right, there are two buttons: 'CANCEL' (gray) and 'CREATE' (orange).

How to Set Up a Report Subscription, cont'd.

- Select a frequency
- Select to Attach Excel Report and include preview rows to give quick access to the information
 - Consider data privacy/security if sharing with people who don't have a Marketo Engage login
- Resource:
<https://docs.marketo.com/display/public/DOCS/Subscribe+to+a+Basic+Report>

New Report Subscription

Subscribe To: Marketability

Email Recipients: * bmassura@etumos.com

Frequency: First of the month

Attach Excel Report:

Email Preview Rows: 30

CANCEL CREATE

What to Do When You Get a Smart List Subscription

1. Note smart list name and filters included in the body of the email
2. Click through to see smart list description for more information
3. Use downloaded report to manipulate/filter data to help review
 - Doesn't need to be done by someone with a login
4. Click through to the smart list to access the people profiles quickly or to see all people
 - Note: Marketo Engage will send only the first 100k people in the subscription

What to Do When You Get a Report Subscription

1. Note report name included in the body of the email
2. Click through to see report description and review settings for more information
3. Use attached report to manipulate/filter data to help review
 - Doesn't need to be done by someone with a login
4. Compare results over time
5. Identify data gaps
6. Create smart lists to investigate further on the people meeting certain criteria

Smart List/Report Subscriptions Summary

	Ease of setup		Medium
	Flexibility		Medium
	Timeliness		Limited
	Ease of Interpretation		Medium - can't add contextual information directly
	Scalability		Medium
	Best for		Higher-volume, medium-impact issues General instance monitoring

5. Admin Routines

Be Clear About Who's Responsible

- Define who is monitoring the shared address that's getting all these emails
 - Primary admin unless on PTO
 - Multiple admins taking shifts
 - One person handles system notifications, another alerts, etc.
- If not using shared email addresses, be sure to **update recipient email** upon role changes or exit from the organization

Establish Service Level Agreements (SLAs)

- Establish how quickly the issues must be investigated and resolved
- Different issues may have different base SLAs
- Establish SLAs with IT, CRM admin, etc., for them to help resolve relevant issues
- Don't keep this info a secret from stakeholders - if priorities have to shift due to an issue, you don't want it to be a surprise

Budgeting Time for General Maintenance and Issue Resolution

- If you allocate all your time to new projects, you will feel you have to drop everything, or you push off issues to “someday”
- Budget a certain amount of your work week towards this ongoing effort
 - The first 30 min of every weekday
 - A couple hours every Friday
 - Align smart list/report subscriptions accordingly
- Mark anticipated action dates on your calendar
 - Your instance’s quarterly idle trigger campaign cleanup
 - Any integration connection that has to be reauthorized periodically, such as LinkedIn

Wrap Up

Key Takeaways

1. Identify and prioritize potential issues
2. Subscribe the right people to system notification alert emails
3. Use alert flow steps for low-volume, high impact exceptions
4. Use smart list/report subscriptions for higher volume, medium-impact exceptions
5. Budget time and set a cadence for monitoring and addressing issues
